31 st	Rise	07.01	-
	Set	18.41	16.37

All times are BST

* following day

The Planets in September

Jupiter

An evening planet, bright at mag -2.9, Jupiter is visible all night, unmistakable in the South.

Saturn

Saturn is also visible all night, lower in the South, and at mag +0.4 much fainter than Jupiter

Uranus

Although it rises before midnight Uranus is best seen as a morning object in the South, not far from the Pleiades.

Neptune

Visible all night but best seen in the early hours in the South.

Meetings at Local Societies

- Given the current Covid-19 situation, all physical meetings at our local astronomical societies have been cancelled until further notice, some continue via Zoom for paid-up members.
- You might like however to see their websites for items of interest:
 - **Guildford AS** <http://www.guildfordas.org/>
 - **Farnham AS** <https://www.farnham-as.co.uk/>
 - **Croydon AS** <http://www.croydonastro.org.uk/>
 - **Ewell AS** <https://ewellastronomy.org/>
 - **Walton AG** <http://www.waltonastrogroupp.co.uk/>

Free Meetings & Talks On-line

- **British Interplanetary Society:** webinar via
Crowdcast
 - *“The BIS – Chronicling the Space Adventure”*
 - Wednesday 15th September, 7.00 - 8.30 p.m.
